

LIVE THE LOCKDOWN

“Happy new year”.....” Happy new year to you and your family”..... these were the wishes we all heard on 1st of Jan 2020 but who knew the entire world would be in the grasp of covid 19, after 1918 Spanish flu this is the most widely affected pandemic which the mankind as ever seen. Government of many countries worldwide have ordered lockdown, so people have to **“live the lockdown”**.

However it has pros and cons effect. Pros of covid 19 effects on our personal life are as follows: we are spending more time with family, eating more of home cooked nutrition’s foods and we got time for our self to nurture our passion and hobbies may be like singing, dancing, painting, playing musical instruments.

It also has positive effects on environment Eg: pollution levels have come down drastically in many metropolitans cities since 80% of people are working from home, wild life in many reserve forests are coming out from their dens and roaming freely since there is no disturbance from travellers and tourists.

Speaking of cons many poor families, labourers and daily wage people have suffered for lively hood despite government and many social service groups have struggled to help them, many business have hit the loss and countries economy have gone down, companies have reduced salaries of their employees to sustain the losses, family gatherings like marriages and engagements could not be conducted on large scale.

Many unreported losses and gains are there of this lockdown, but we have to **“live the lockdown”**.

I thank my school committee for organising this essay writing event
