Covid-19 originated in Wuhan, China. Covid-19 is also known as Corona virus. This is a new infectious disease caused by a new corona virus. This virus has come from bat. This virus is transmitted through respiratory droplets, contact with contaminated surface and direct contact with infected people.

Its incubation period is 5 to 14 days. Its symptoms are high fever, cough, shortness of breath. If you suffer from any of these symptoms contact the nearest hospital and wear mask. Some of the cases are without symptoms.

Some of its preventive methods are isolation, social distancing use your elbow or tissue while sneezing, washing hands, balanced diet, wearing mask etc. Its medicine has not been discovered till yet. so the best treatment till now is isolation and quarantines. Nasal swab is taken for Covid-19 test.

This pandemic has created many problems in the world. Some of the problems are - schools are closed which affect childrens education, peoples are suffering financial loss. Most of the

doctors life is at risk. The government of Saudi Arabia has provided free treatment for people suffering with COVID-19. The government of all the countries are trying their best to save their ~~peop~~ citizens from this pandemic. As a result of this pandemic there is a lockdown in most of the countries. Clinical trials of COVID-19 vaccine being done in many countries.

Since the end of this pandemic is unknown, the government of the respective countries are trying to bring back the life to normal in phase wise with lots of precaution.

This pandemic the silver lining is that the death rate are slow and recovery rate is fast.

Finally I want to say that this pandemic has taught that life is unpredictable, so make the most ~~out of~~ out of your time and be happy and positive always.
